Ideation Phase

Define the Problem Statements

Date	08 October 2026
Team ID	SWTID-2026-2540
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Problem Statement Template:

The supplied template uses the sequence: I am (Customer) → I'm trying to → But → Because → Which makes me feel. The following statements apply that structure to the Script-Controlled ACL project.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an EEE branch user with the bb1 role	view Institution Details records relevant to my branch	I must not see records belonging to other branches	the system needs to enforce the Branch = EEE condition together with the READ ACL	secure and confident that unrelated records are protected
PS-2	a ServiceNow security administrator	give users only the operations they are authorized to perform	users may need different create, edit and delete privileges	CREATE, WRITE and DELETE are controlled separately through bb2, bb3 and bb4 ACLs	in control of record security and able to verify permissions clearly

Problem Statement Interpretation

- PS-1 focuses on record visibility and the user's need to access relevant EEE records without exposing other branch records.
- PS-2 focuses on the administrator's need to separate permissions by operation and validate the resulting access behavior.
- Both statements connect directly to the source project's objective of protecting records from unauthorized viewing, modification, creation and deletion.
