Requirement Analysis

Technology Stack (Architecture & Stack)

Date	08 October 2026
Team ID	SWTID-2026-2540
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Technical Architecture:

The architecture below represents the components directly supported by the supplied Script-Controlled ACL resource. It does not introduce external APIs, ML services or separate databases that are not specified in the resource.

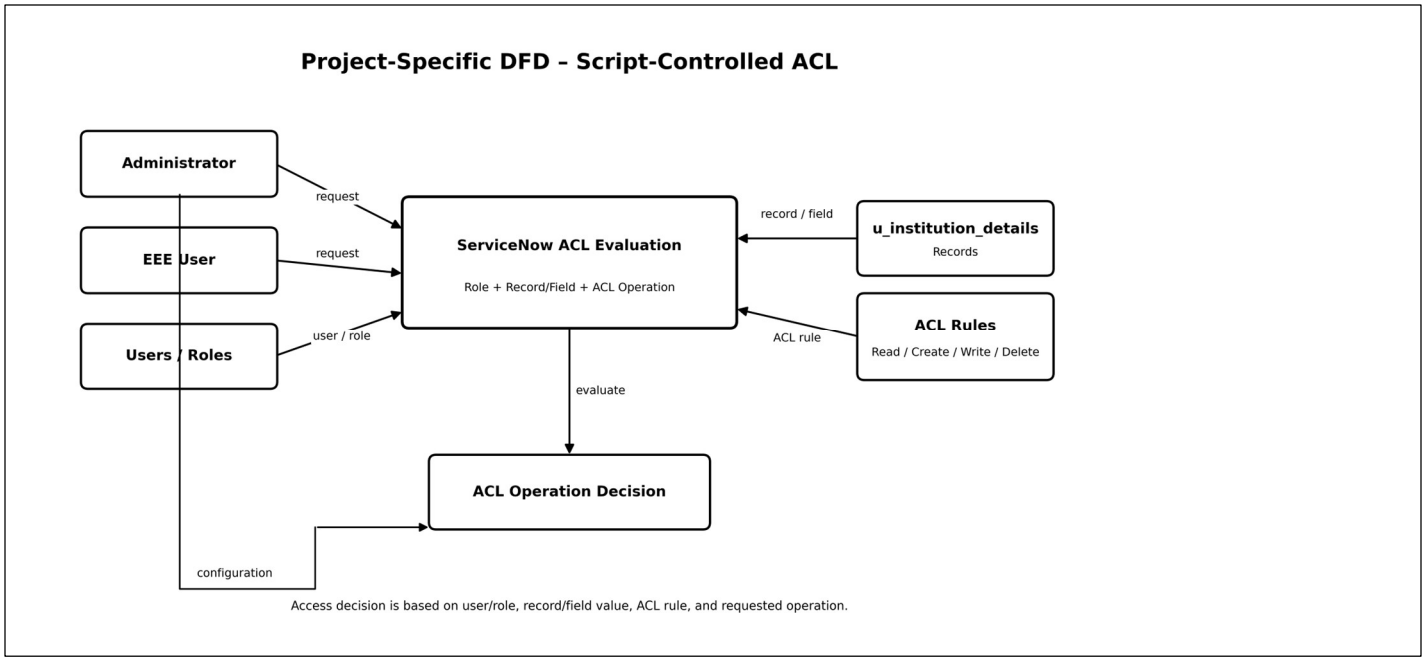

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	The administrator and test user interact with the ServiceNow application through its platform interface.	ServiceNow Platform UI
2.	Application Logic-1	User creation, role creation/assignment and table configuration are performed in ServiceNow.	ServiceNow Administration / Configuration
3.	Application Logic-2	The Read ACL evaluates the required role, Branch condition and supplied script.	ServiceNow ACL + GlideSystem (gs) script
4.	Application Logic-3	Create, Write and Delete access are controlled by separate record ACLs requiring bb2, bb3 and bb4 respectively.	ServiceNow Access Control List
5.	Database	Stores the custom table and its records, together with ServiceNow user/role and configuration data.	ServiceNow Platform Data Store
6.	Cloud Database	No separate cloud database is specified in the supplied project resource.	Not specified
7.	File Storage	No application file-storage component is specified in the supplied project resource.	Not specified
8.	External API-1	No external API is specified in the supplied project resource.	Not specified
9.	External API-2	No external API is specified in the supplied project resource.	Not specified
10.	Machine Learning Model	No machine-learning model is specified in the supplied project resource.	Not specified
11.	Infrastructure (Server / Cloud)	The project is implemented and tested in a ServiceNow instance.	ServiceNow Instance

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	No open-source framework is specified in the supplied project resource.	Not specified

S.No	Characteristics	Description	Technology
2.	Security Implementations	Record-level ACLs use roles and, for Read, a Branch=EEE data condition and the supplied script. Admin users are explicitly allowed full Read access.	ServiceNow ACLs; roles; data condition; GlideSystem script
3.	Scalable Architecture	The resource does not specify a scalability architecture such as 3-tier or microservices.	Not specified in resource
4.	Availability	The resource does not specify an availability target, load balancer or redundancy mechanism.	Not specified in resource
5.	Performance	The resource does not specify request-rate, response-time, cache or CDN requirements.	Not specified in resource
